

Business Intelligence in the Supply Chain

The VSc Solutions mission is to “Empower you to make inspired business decisions”. It is for this reason that we recently launched our **Business Intelligence Integration** solution.

Traditional Business Intelligence (BI) solutions would be purchased from the relevant providers as a software package. You would then be responsible for implementing BI through your IT department or would need to find a company that can assist. VSc solutions are experts in all facets of the supply chain including transport management, systems integration / visibility and consulting. We combine this knowledge into our Business Intelligence offering, resulting in a customised, integrated solution tailored for your supply chain that guarantees that tangible value will be realised as your company evolves.

This solution will extract relevant data from multiple disparate internal systems and if required, across multiple organizations after which we are able to populate such data into pre-defined and custom developed reports and dashboards using the our reporting tool. This will allow any business to accurately and effortlessly monitor their core business via various dashboards and also drill down into more detail on any item at the click of a button. We turn real time data into information that “Empowers you to make inspired business decisions”!
