

## *Route Optimisation, Simplified*

VSc has implemented and supported the Roadshow route optimisation software solution for over a decade. We have built up a substantial client base which combined with our expertise and experience in the route optimisation arena, positions us as a leading provider of these services.

Approximately two years ago VSc identified a need for a leaner, more agile route optimisation solution to complement our existing offering. The new solution would be designed to be a fit for organisations with smaller fleets and / or restricted budgets.

The journey is complete and we are proud to announce the launch of **Motion**, VSc's new in-house, cost effective routing solution.

Motion has been favourably benchmarked against world class routing applications and has proven to dramatically decrease the time a business spends planning and assigning vehicles to routes and schedules, offering improved customer service through more accurate delivery times and tighter delivery windows. Costs are reduced in three areas:

- \* Reductions in transport resources including vehicle fleet size reductions
- \* Lower vehicle mileage and fuel costs through more efficient routing
- \* Lower labour costs

With multiple vehicle types and multiple territories, the VSc route planning solution offers a world class, easy to use system with centrally hosted data storage and processing and capabilities which include configurable customer offload rates, adjustable route start times and trip sheets to keep track of your fleet from the comfort of your desk.
